Sunday 06 September 2026, kick-offs from 13:30 | 13 fixtures | generated 06 Sep 2026 15:50

How these were produced. A Dixon-Coles bivariate Poisson model fitted per league on 14,788 matches of results, weighted so recent games count more, blended with a second model fitted on shots on target. Where a closing price exists it is de-vigged and folded in at 90% weight. Every market below is read off one scoreline distribution per fixture, so no two numbers on a row can contradict each other.

What this is not. Over 5,948 walk-forward tests this engine scores a log-loss of 0.9568 against the bookmakers' closing consensus at 0.9558 - it matches the market, it does not beat it. Betting the model's disagreements with the price lost 12.2% of stakes over 3,761 historical bets. Treat these as calibrated estimates of how likely things are, not as tips with an edge.

Clubs with no history in their division. Academico Viseu (Primeira Liga, no lower-division record, promoted-team prior used); Amedspor (Super Lig, no lower-division record, promoted-team prior used); Corum (Super Lig, no lower-division record, promoted-team prior used); Den Haag (Eredivisie, no lower-division record, promoted-team prior used); Troyes (Ligue 1, no lower-division record, promoted-team prior used).

Reading the numbers. 1 / X / 2 are home win, draw and away win. O2.5 and U2.5 are over and under 2.5 total goals. BTTS is both teams to score. Score is the single most likely scoreline, which is often not the same as the most likely result: a favourite's win is spread across many scorelines while draws concentrate on 1-1.
